Architects and teams

Architects versus engineers

Software architect

- MS in Computer Science
- extensive experience in dev and project management
- leadership
- analytical to see details and big picture
- 5-8 years as software engineer.

Roles

- Report to stakeholders about requirements.
- Design documents and instructions.
- Create blueprints and runways.
- Ensure functionality across design.

Vs

Software engineer

- BA or MS in Computer Science
- 5 years of Dev experience
- technical lead through full SDLC cycle
- understands distributed/scalable through high-volume transactions.

Roles

- Determine feasibility of issues.
- Investigate challenge areas across development.
- Design, develop, and deploy solutions.

Evaluating architecture in teams (1/2)

Designing teams is as important as enterprise architecture.

Mix people, process, and technology.

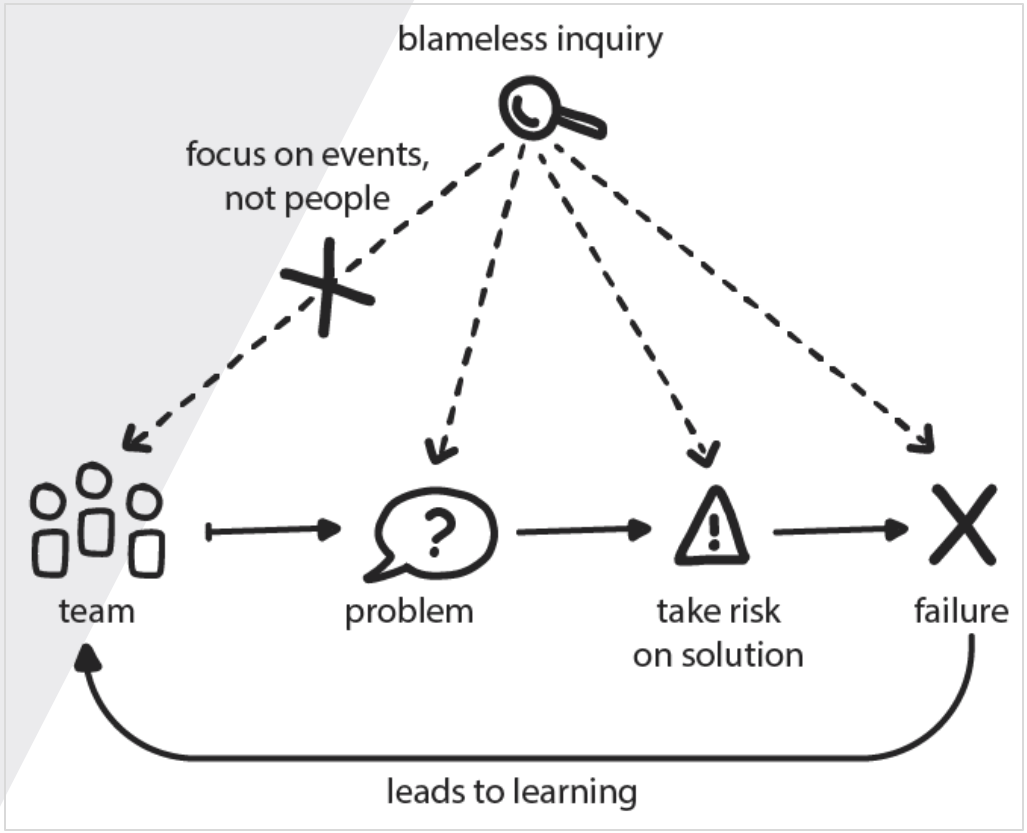

Binary assessments

Architectural runway

Runways are for landing

- Articulates Dev timeframes.
- Allows visual link to features.

Commonly associated with Scaled Agile Framework (SAFe)

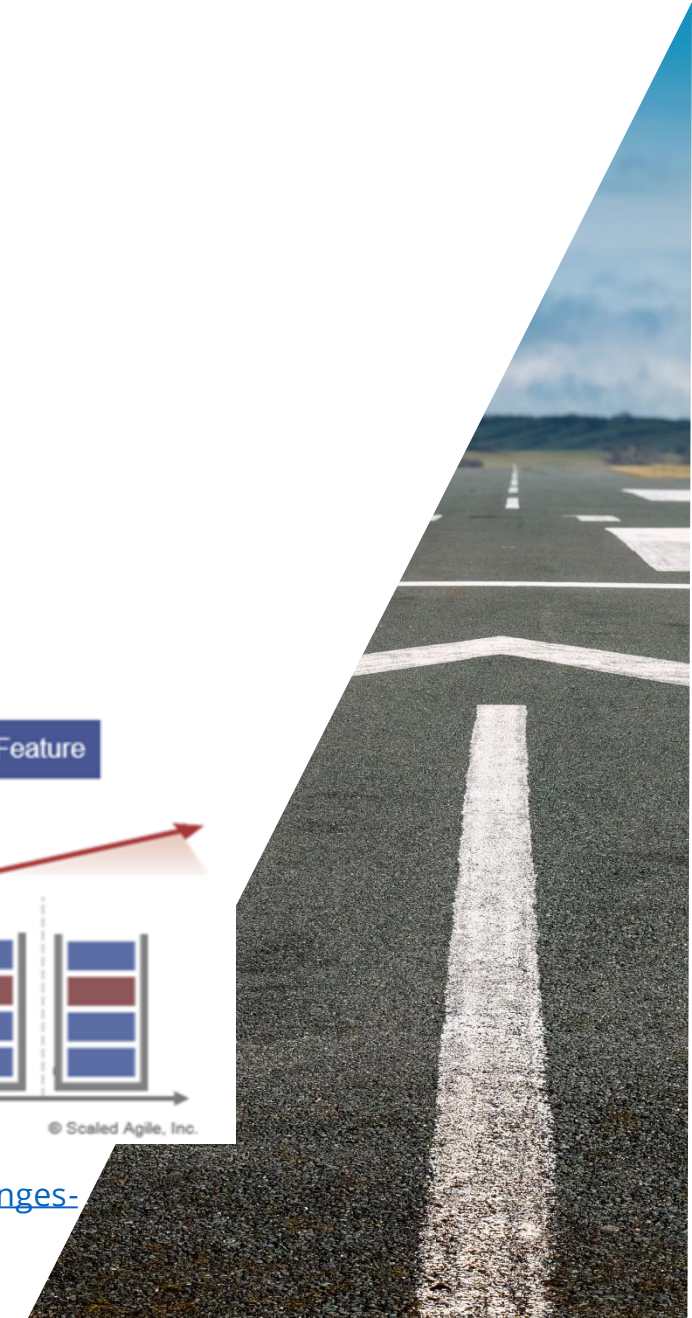

- Hybrid step for DevSecOps.
- Allows some advanced planning.

Designing a runway

- Identify iterations.
- Highlight key features.
- Track dependencies.
- Group consensus.

Teams and architects

How should an architect interact with a Dev team?

- Architect pairs with engineer, PM to set a framework.
- Devs work within the framework.

Where do architects fit in the DevSecOps model?

- Central.
