What is infrastructure?

IT infrastructure

All of the hardware, software, networks, facilities that are required to develop, test, deliver, monitor, control, or support IT services.

- The term IT infrastructure includes all of the information technology but not the associated people, processes and documentation. *(ITIL® Foundation: ITIL 4 Edition* Official Book)
- Everything that happens on a computer depends on infrastructure:
  - systems management
  - storage management
  - network management.
