People: staying trained

Global agile

The Good News

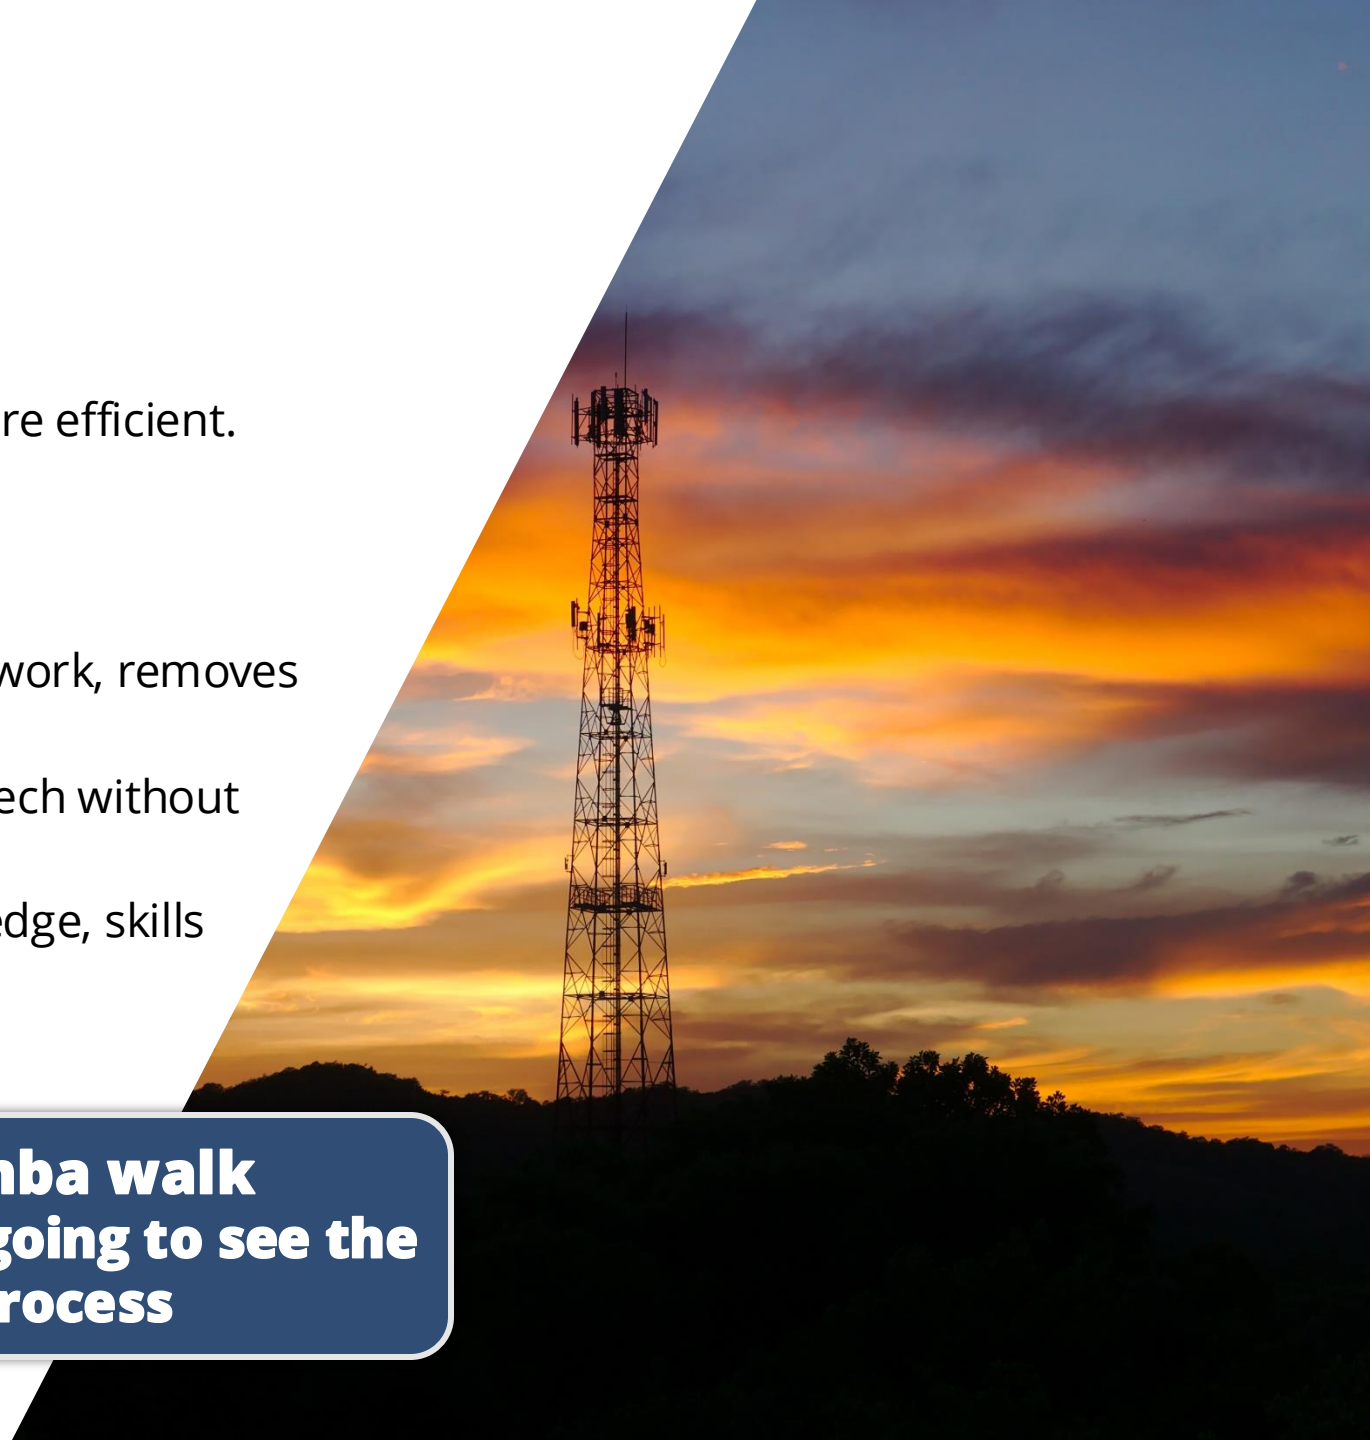

- With some work, global business can introduce diversity of thought.
- Global software development faces trans locality challenges:
  - coordination
  - temporality
  - communication.
- Scaled agile also offers cultural challenges:
  - lack of face-to-face communications
  - improper task allocation
  - cultural differences
  - temporal differences
  - linguistic challenges
  - lack of coaching.
- Research shows more diverse teams share knowledge better.
- Spreading agile globally with better technology allows great benefits but also risk.

Communication

- Communication advances mean faster and more efficient.
- Face to face only works if video turned on:
  - work past the Great Resignation
  - need to interact with people.
- Management in remote situations takes more work, removes Gemba walk opportunities.
- Future trends focus on tech but cannot move tech without communication.
- All new technology requires training for knowledge, skills and abilities.
- How do you manage team communication?
  - slack channels?
  - subcontracts?
  - team events?

Computer-assisted engineering (1/2)

CASE has been around for some time:

- More complex systems require more simplification.
- **Pros:** emphasizes design, improves quality, delivery, time.
- **Cons:** cost, training, tool mix.

New tools will spark new integrations.

Some hardware options will be domain specific:

- cryptocurrency miners
- ML GPUs
- quantum options.

Some tools require company specific add-ons.

Computer-assisted engineering (2/2)

Types of CASE Tools

- Diagramming tools
- Computer display generators
- Analysis tools
- Central repository
- Document generators
- Code generators

Tempo

- Advancing technology can push higher tempos.
- Remember, DevOps strives for no-heroes:
  - Make work visible.
  - Set clear goals.
  - Maximize the work not done.
- Accelerated pipelines; more speed means more wear.
- Increased workload mobility; remote and work from anywhere.
- Security challenges emerge in environment and source-control.
- Use clear team roles to control tempo.

Maintaining skills

Knowledge
Academic tools for success

Natural gifts to accomplish tasks

- **Future options** require **future skills.** Keeping workers up to date requires constant interaction:
  - new skills
  - new certifications
  - staying on top with new tools
  - new patterns of communication.
- **Plan for expanding skillsets:**
  - budget for learning
  - lunch and learn
  - reward success.

Skills
Things you practice to improve

Sharing
Communicate with others to improve success.
